

## **Abstract**

This study aims at exploring the different practices of material management being followed in the construction industry and recommend a material management system which will facilitate the construction of a project mainly building construction project sites in Karachi.

Aim of this study was to analyse and improve the current job-site material management practices being followed in commercial building sites, for that a questionnaire survey was developed and distributed to various organisations in Karachi and data was collected and problems in the practices were discovered.

After analyzation improvements in the current practices were presented in chapter 5 and was found that they do not have a proper system of material management and it was presented in chapter 5.
